Plastic U-Tube Cleaner

**Product Name:**

Plastic U-Tube Cleaner

Part Number:

Refer to Conco Standard Size Chart for Plastic U-Tube Cleaners.

Application:

The Conco Plastic U-Tube cleaner is uniquely designed to navigate u-tube configurations in heat exchangers and feedwater heaters. Used with the standard Conco accessories, the Plastic U-Tube cleaner removes deposits, restoring efficiency and allowing for improved eddy current testing results. It is very important to follow the Conco recommended procedure for U-Tube cleaner applications. This procedure is available on requests. The Plastic U-Tube cleaner is able to navigate very tight radiuses on u-bends.

Description:

Made from high density plastics and/or carbon steel, Conco U-Tube cleaners are uniquely designed for removal of difficult deposits that impede heat transfer efficiency and unit flow rate.

- Safe, water powered tube cleaners, do not use air pressure.
- Provides optimum ID surface coverage.
- Designed to meet tube specifications.
- Color-coded heads to distinguish size.
- Manufactured from 5/8" to 1-1/4" OD in all BWG's.

Storage Information:

Packaged in plastic bags for long, undeterminable shelf life. Store in a cool, dry area. Discard after use.

Auxiliary Equipment Required: Conco Model 200B Pump System complete with water guns, nozzles, and hose.

Determination of Quantity:

The Conco Plastic U-Tube cleaner is good for cleaning 6 tubes each depending on the severity of deposits. Simply divide the total number of tubes to be cleaned by six to determine the required number of cleaners needed for your application. To increase the overall speed of the job, or if planning to clean multiple units, increase the number of cleaners to be used to 25-50 percent of the total number of tubes to be cleaned.
